

help save inSITE

take a minute &

Please join our Campaign for A Common Sense Drug Policy, and help save InSite and harm reduction programs across Canada.

InSite is Canada's only supervised injection site. The program started as a three-year study that has met the highest academic standards to show that InSite has resulted in:

- 30% increase in the use of addiction treatment
- Reduced public injections
- Reduced transmission of blood-borne infections like HIV and Hepatitis C
- No increase in drug-related crime rates

InSite exists because of an exemption under the federal Controlled Drugs and Substances Act, but InSite may be forced to close when the exemption expires in December, 2007. Send me back this card and you'll send a message to Ottawa to save InSite. It's postage free.

Dear Prime Minister Harper,

I support InSite and other important harm reduction programs.

Drug use must be addressed as a public health issue. Scientific evidence continues to show that harm reduction programs like Vancouver's supervised injection site, are successful in saving lives and increasing access to treatment. Communities and municipalities across the country are calling for more resources to expand harm reduction, prevention and treatment programs.

I urge you to extend the Health Canada permit for InSite and ensure harm reduction is an ongoing part of Canada's National Drug Strategy.

Sincerely,
